

STREETSMARTV2™

STREETSMARTV2 is an entirely new product built on GRIDSMART's uncompromising core principles of **Simple. Flexible. Transparent.**

V2 deploys WiFi capture technology for larger sample sizes than Bluetooth technology and exports rich data delivered through value-added reporting.

Through the user-friendly GRIDSMART.cloud interface, technicians receive actionable data reports on travel time, origin destination, volume by phase, turning movements, red and green arrival ratios, and other signal performance metrics.

V2 offers GRIDSMART's simple installation process and takes less than one hour to complete.

FEATURED CAPABILITIES

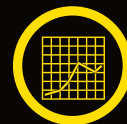

ORIGIN DESTINATION

V2 offers insights into origins and destinations from strategic points in your community.

TRAVEL TIME

V2 delivers higher sample rates for more accurate travel times.

SIGNAL PERFORMANCE METRICS

V2 complies with all industry standard performance reporting.
